Inductive Reasoning

This assessment measured your ability to identify rules and relationships in a given pattern and draw logical conclusions. Inductive reasoning involves evaluating and combining information to form conclusions and make decisions. It is relevant when problem solving, generating predictions, and making forecasts. Inductive reasoning is important for success in the business unit you have applied to.

Your Results

Your performance score has been calculated based on how many questions you completed and how many you answered correctly. Your performance score suggests that you performed well above the requirements for the specific role you applied to. Inductive reasoning is one of your key strengths.

Enhancing your Performance

Here are some tips to help you improve your skills at spotting patterns in information:

- Complete logic puzzles and games. When solving puzzles, keep thinking of different approaches rather than just applying what you know.

- Look for patterns and relationships amongst data and other information you have access to. Being able to identify links will help you discover broader patterns to apply elsewhere.
